June 15, 2026

Problem 1

A circle has radius $r = 3$ cm. Find its area.

$$A = \pi r^2 = \pi \cdot 3^2 = 9\pi \approx 28.27 \text{ cm}^2$$

Problem 2

A circle has diameter $d = 10$ cm. Find its area.

$$r = \frac{d}{2} = 5, \quad A = \pi r^2 = 25\pi \approx 78.54 \text{ cm}^2$$

Problem 3

A pizza has area $A = 50.27 \text{ in}^2$. What is its radius?

$$r = \sqrt{\frac{A}{\pi}} = \sqrt{\frac{50.27}{\pi}} = \sqrt{16} = 4 \text{ in}$$
